

C'mon Guys, give us and satellite radio a break. Broadcast radio is suffering because they haven't kept up with technology, and they aren't able to give the public the kind of radio we desire. We have found what we want with satellite radio. Please allow free enterprise to work here. I want to make my own decisions about where I get my music and other information from. The government should not be making those decisions for me, or any other American citizen. Don't you dare force the free stuff on me, especially if I'm willing to pay for this kind of service. I respectfully urge you to reject the NAB's petition 04-160
